

Hydraulic Economic Synchronize CNC Press Brake 220V 380V 415V 440V

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: genuo
- Certification: M.2019.206.C3862
- Model Number: ESC-40T/63T/80T/100T/125T/160T/200T/400T
- Minimum Order Quantity: 1
- Price: negotiable
- Packaging Details: carton box
- Delivery Time: 90 days
- Payment Terms: L/C,T/T,D/P,D/A
- Supply Ability: 1 Set/Sets Every 15~35 days

Product Specification

- Product Name: Hydraulic Cnc Bending Machine
- Application: Stainless Steel Metal Sheet Plate Bending
- Machine Controller: Genuo Independent Research And Development
- CNC Control: ETC-16 CNC Control
- Applicable Voltage: 220V/380V/415V/440V/customized
- Optional Color: Customer Choose
- Product Main Motor: STJ Main Motor
- Electrical Components: Schneider
- Hydraulic System: Bosch Rexroth Germany
- Applicable Material: Metal .Stainless Steel .Aluminum. And So On
- After-sales Service: Online Support Video Technical Support
- Product Selling Point: Competitive Price/Sustainability/high Precision
- Quality Assurance Service: Presented Two Years Warranty
- Degree Of Automation: Fully

PRESS BRAKES

EXCELLENT ESC Series

New Machine description

GENUO's Excellent ESC series is the latest generation of high-performance synchronized CNC Press Brake. Combining GENUO's independently developed controller, it maximizes value creation and reduces costs. User-friendly operating system and first-class design. Adhering to the philosophy of GENUO (Details Create Quality). With super quality and high precision, it also has a huge competitive advantage. More convenient to use, high cost performance!

CNC Control _

ETC-16T is a new generation of performance bending control system of GENUO dedicated to synchronous press brakes. The system has rich interfaces, which can be easily connected to the automatic production line as a bending unit. It can cooperate with industrial robots in interactive operation to the greatest extent free from

15.6" LED real color LCD screen with friendly man-machine interface, menu operation is easy to learn and easy to use. The Linux operating system is stable and reliable, High sensitivity resistive touch screen, support glove operation. Intelligent algorithm and Flexible programming,

manual intervention, improve the accuracy and efficiency of the equipment.

Automatically calculate the bending process, three modes for you to choose from.

Machine Main System—

Backgauge System: Establishing the right back gauge for your projects will allow for increased part production and precision. From intricate parts which typically require more axes to large quantities that require more time and therefore increased cost, the correct back gauge for each job is essential to lowering costs per part which ultimately benefits your bottom line.

Auto Crowning System: To confirm a constant bend angle, manual or CNC crowning is essential which will offset potential deviations and allow for possible tooling wear to maintain parallel contacting surfaces. CNC crowning systems allow the press brake control to be pre-programmed with machine characteristics and deflection data. Adjust the calculate and setting accordingly for different characteristics of different materials.

Structure Configuration—

Linear Encoder Feedback

Hydraulic System

Proportional control "hydraulic system block"

Hydraulic transmission with high reliability

integrated hydraulic system can effectively alleviate the problem caused by leakage of hydraulic fluid.

The deformation is measured accurately
Compensated by feedback method
The accuracy can be achieved μm level

Electric Component

Strong and durable, ensure the stable operation of the machine.

Reasonable line connection and arrangement greatly reduces the failure rate.

The integrated control module of hydraulic valve group makes the sliding block move smoothly and accurately.

Gasket Sealing Ring

It has good sealing performance, pressure resistance and wear resistance

It is elastic enough not to deform due to temperature changes

Comply with international safety standards and industrial specifications

Optional Configuration _

LASER Safety Guards

DSP LASER protects the press brake operator from the danger of crushing that can take place accidentally between the moving part of the machine and the fixed one. It assures to carry out the machine working cycle penalizing its execution time in the least.

CNC Sheet Follower

Suitable for all kinds of large sheet metal, especially thin metal sheet. Perfect to maintain synchronization with the sheet during the bending process, which lightens the operators work moving heavy pieces, improves bending efficiency and reduces operator risk.

Angle Measuring System

Automatic angle measuring system can measure workpieces and regulates the angle, regardless of material variations. Reduce your materials consumption, shorten your machining times to get work started more quickly.

Standard Equipment	Optional Equipment
▲ GENUO ETC-16T 4 Axis CNC Control	△ ETC-16T 5 Axis/7 Axis CNC Control
▲ Integral welded rigid high tensile steel frame	△ DSP or SDKELI Lasersafe protection guard
▲ High precision Y1,Y2 axis synchronized closed-loop feedback	△ Energy saving & low noise main servo SVP control
▲ Accurate X axis back gauge system	△ 2 Axis(X,R) or 4-Axis (X,R,Z1,Z2)back gauge
▲ CNC Motorized crowning system	△ The CNC Bending Sheet Follower
▲ European-style punch and 4V/2V/1V Dies	△ WILA type top and bottom tool clamping system
▲ Fast punch clamps and movable sliding front support	△ Bending tools management cabinet or trolley

ESC Technical Specification —

Model	Nominal Pressure	A Length of Table	B Distance Between Columns	D Throat Depth	E Open Height	C Ram Strokes	Motor Power	Approx Weight	Overall Dimension
ESC	(KN)	(mm)	(mm)	(mm)	(mm)	(mm)	(kw)	(kg)	(L x W x H)(mm)
