

High Precision CNC Sheet Metal Bending Machine Hydraulic Press Brake

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: GENUO
- Certification: M.2019.206.C3862
- Model Number: ESC-40T/63T/80T/100T
- Minimum Order Quantity: 1
- Price: negotiable
- Packaging Details: carton box
- Delivery Time: 70days
- Payment Terms: L/C,T/T,D/P,D/A
- Supply Ability: 1 Set/Sets Every 15~35 days

Product Specification

- Machine Name: Hydraulic Cnc Bending Machine
- Application: Stainless Steel Metal Sheet Plate Bending
- CNC Control: ETC-16 CNC Control
- Optional Voltage: 220V/380V/415V/440V
- Controller System: Genuo Independent Research And Development
- Color: Customizable
- Machine Motor: STJ Main
- Electrical Components: Schneider
- Hydraulic System: Bosch Rexroth Germany
- Oil Pump: Sunny Oil Pump
- After-sales Service: Online Support Video Technical Support
- Value-added Services: Presented Two Years Warranty
- Type Of Automation: Fully Automatic
- Core Selling Point: Competitive Price

Product Description

**High Precision CNC Sheet Metal Bending Machine Cheap Price Factory
Manufacture Hydraulic Press Brake For Sale**

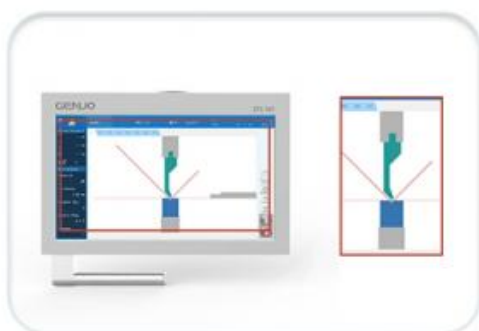

EXCELLENT ESC Series Press Brake

New Machine description

GENUO's Excellent ESC series is the latest generation of high-performance synchronized CNC Press Brake. Combining GENUO's independently developed controller, it maximizes value creation and reduces costs. User-friendly operating system and first-class design. Adhering to the philosophy of GENUO (Details Create Quality). With super quality and high precision, it also has a huge competitive advantage. More convenient to use, high cost performance!

Machine Controller

ETC-16T

- ▲ 15.6" LED real color LCD screen with friendly man-machine interface, menu operation is easy to learn and easy to use.
- ▲ The Linux operating system is stable and reliable, High sensitivity resistive touch screen, support glove operation.
- ▲ Intelligent algorithm and Flexible programming, Automatically calculate the bending process, three modes for you to choose from.

Configuration & Selection

Backgauge System

Backgauge System: Establishing the right back gauge for your projects will allow for increased part production and precision. From intricate parts which typically require more axes to large quantities that require more time and therefore increased cost, the correct back gauge for each job is essential to lowering costs per part which ultimately benefits your bottom line.

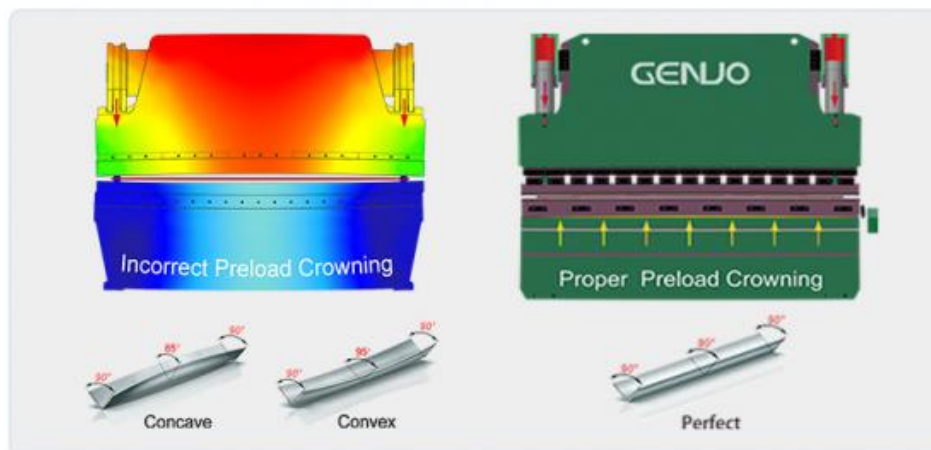

2 Axis Back Gauge (X,R)

4 Axis Back Gauge (X,R,Z1,Z2)

Crowning System

Auto Crowning System : To confirm a constant bend angle, manual or CNC crowning is essential which will offset potential deviations and allow for possible tooling wear to maintain parallel contacting surfaces. CNC crowning systems allow the press brake control to be pre-programmed with machine characteristics and deflection data. Adjust the calculate and setting accordingly for different characteristics of different materials.

Optional Configuration

LASER Safety Guards

DSP LASER protects the press brake operator from the danger of crushing that can take place accidentally between the moving part of the machine and the fixed one. It assures to carry out the machine working cycle penalizing its execution time in the least.

CNC Sheet Follower

Suitable for all kinds of large sheet metal, especially thin metal sheet. Perfect to maintain synchronization with the

sheet during the bending process.
which lightens the operators work
moving heavy pieces, improves bending
efficiency and reduces operator risk.

Angle Measuring System

Automatic angle measuring system
can measures workpieces and
regulates the angle, regardless of
material variations.

Reduce your materials consumption,
shorten your machining times to get
work started more quickly.

Structure Configuration

Proportional control "hydraulic system block"

Hydraulic transmission with high reliability

Integrated hydraulic system can effectively
alleviate the problem caused by leakage
of hydraulic fluid.

Strong and durable, ensure the stable oper-
ation of the machine.

Reasonable line connection and arrange-
ment greatly reduces the failure rate.

The integrated control module of hydraulic
valve group makes the sliding block move
smoothly and accurately.

The deformation is measured accurately

Compensated by feedback method

The accuracy can be achieved uM level

It has good sealing performance, pressure
resistance and wear resistance

It is elastic enough not to deform due to
temperature changes

Comply with international safety standards
and industrial specifications

Standard Equipment

Optional Equipment

▲ GENUO ETC-16T 4 Axis CNC Control	△ ETC-16T 5 Axis/7 Axis CNC Control
▲ Integral welded rigid high tensile steel frame	△ DSP or SDKELI Lasersafe protection guard
▲ High precision Y1,Y2 axis synchronized closed-loop feedback	△ Energy saving & low noise main servo SVP control
▲ Accurate X axis back gauge system	△ 2 Axis(X,R) or 4-Axis (X,R,Z1,Z2)back gauge
▲ CNC Motorized crowning system	△ The CNC Bending Sheet Follower
▲ European-style punch and 4V/2V/1V Dies	△ WILA type top and bottom tool clamping system
▲ Fast punch clamps and movable sliding front support	△ Bending tools management cabinet or trolley

ESC TECHICAL SPECIFICATION

		A	B	D	E	C			
Model	Nominal Pressure	Length of Table	Distance Between Columns	Throat Death	Open Height	Ram Strokes	Motor Power	Approx Weight	Overall Dimension
ESC	(KN)	(mm)	(mm)	(mm)	(mm)	(mm)	(kw)	(kg)	(L x W x H)(mm)
40T/1600	400	1600	1250	300	420	150	4	2800	1950*1750*2350
